

E511

faint lamns = 2-3 p/d

bioturbation?

90% msv with 1-2 faint discort. <1mm th lam (burrowing animals destroyed lamns)

well laminated -- lamns 2 p/d

Only reasonable explanation is that 96-95 & 96-94 were put in wrong side in the core lab.

E525

490

<1mm
predom. msv w/ possible burrows

faintly laminated

E533

500

Note: no w/gc

is this a bioturbated w/gc? Burrows were may have obliterated laminated.

upper: This unit is similar to lower part of gcl but more silt/clay
